Description of the general nature of what was agreed to if an agreement was reached, or any other comments:

Reviewed rejections of record. Discussed possible ways to address prior art rejections by distinguishing claimed amino acid sequences which must comprise residues 79-84 from those of the cited prior art which appear to be primarily directed to residues 61-85. Examiner to consider whether claims directed to dimers would help distinguish over the cited prior art. Examiner agreed that prior art rejections did not apply to alpha-beta, beta-beta or beta-alpha dimers because the prior art does not teach the reverse 84-79 sequence.

(A fuller description, if necessary, and a copy of the amendments, if available, which the examiner agreed would render the claims allowable must be attached. Also, where no copy of the amendments which would render the claims allowable is available, a summary thereof must be attached.)
